

College Programs at Brookhaven National Laboratory (BNL)

Summer Internship Program

BNL offers a summer internship program for undergraduate and graduate students. This is a paid 10-week program. The work schedule is Monday through Friday; 8:30-5:00. Students are matched with mentors in the areas of science, engineering or administration. The purpose of this program is for the students to gain real-life work experience and learn about some of the research and development projects at the Laboratory.

Semester Co-op Program

BNL offers a co-op program during the school year for undergraduate and graduates. This is a paid program and the actual work hours are varied in order to work within the students' school schedule. The purpose of this program is for the students to gain real-life work experience and also learn about some of the research and development projects at the Laboratory.

The GEM Program at Brookhaven National Laboratory

The GEM Fellowship program is designed to offer opportunities for underrepresented minority students to obtain an MS degree in engineering and a Ph.D. degree in engineering, natural, and physical sciences. Upon acceptance to the GEM Fellowship, the student will have a paid summer internship and graduate financial assistance.

For 29 years, companies and universities have worked together providing graduate education in engineering and science to over 2,600 underrepresented minority students. GEM is a unique network of universities, companies, government agencies, alumni and faculty. Through this collaboration, the success of students attaining graduate degrees is maximized.

Brookhaven National Laboratory is very proud to be a member of GEM and we sponsor at least two students per summer.
